

Please be careful not to bring any metals. (e.g.magnetic materials)

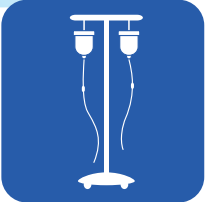

There is always a strong magnetic field in the room, causing magnetic adsorption and burn (scalding) accidents.

Check again before entering the room!!

It is strictly prohibited to bring metals(e.g.magnetic materials) into the MR examination room.
Even if you are used to it, please double-check before entering the room!

Accidents have occurred in which large items such as infusion stands, stretchers, and oxygen cylinders, as well as small items such as office supplies and accessories placed in pockets, are absorbed by MR equipment when patients are brought into an MR examination room or for other reasons.

In case of the adsorption, do not attempt to forcibly pull it off, but contact the MR equipment manufacturer.

- Drip stand
- J Bag

- Oxygen cylinder

- Stretcher

- Wheelchair

- Office supplies

- Scissors

- Thermometer
- Sphygmomanometer
- Electrodes

- Small medical steel articles
- Pus basin

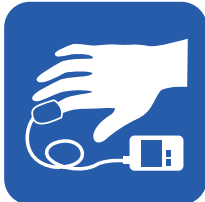

- USB/SD/PC/AC adapter/external HDD, etc.

- Medical devices that may be affected by MR examination

- Pacemaker programmer

- Pulse oximeter
- Vital signs monitor

- Thermoflex blanket (Aluminum-lined Blanket)

- Stethoscope

- Blood transfusion pump (Especially AC adapter)
- Cap for infusion line

- Bucket
- Mops

- Stepladder

- Cleaning tool
- Polisher
- Bucket

Checklist before entering the MRI room

Please check again not to bring any magnetically sensitive items or items made of unknown materials.

If you enter the MRI examination room without removing, it may cause adsorption or burn accident, which is very dangerous.

Nonremovable metals

- Cardiac pacemaker and its lead
- Various Stents
- Defibrillator
- Stimulating electrode
- Shunt

- Cochlear implant
- Hearing aid
- Clip for cerebralaneury sm operation
- Clip placed in the body

- Tattoo

- Gold thread, etc., implanted during cosmetic surgery
- Permanent eyeliner

- Magnetic ocular prosthetic
- Those who have metal chips/ powder in their body due to work experience in metal processing or accidents

- Prosthesis
- Metal bolt for fracture treatment
- Artificial bones and joints other than titanium
- Halo vest
- Tissue expanders (during breast reconstruction)

- Implant
- False tooth
- Full-fledged orthodontic appliance (Multi Bracket System)
- Dental magnetic implant

※ For patients who have medical devices implanted in their bodies

MRI examinations may not be performed on patients who have metal objects placed or implanted in their bodies.
For more information, please contact the person concerned at your medical institution.

Removable metals, cosmetics, etc. (If you have any questions, please contact the manufacturer of each product.)

- Color contact lens
- Eye shadow

- False eyelashes
- Mascara

- Glasses

- Wig
- Hair extension
- Hair-raising spray
- Hair-increasing agent

- UV care products (including creams, sprays, and powders)
- Cosmetic containing metal ions
- Foundation
- Warm cream

- Hairpin
- Barrette (hair stopper)

- Accessories
- Ring earrings (Body piercing)

- Nail art,Gel nail ,Acrylic nail
- Magnetic nail
- False nail
- Manicure
- Ingrown Nail Corrector

- Metal clothing and underwear with hooks and fasteners
- Stapler (cleaning tags)

- Clothing containing metal thread
- Underwear (innerwear, moisturizing underwear, corrective underwear , etc.)

- Brassiere

- Magnetic plaster
- Various hand warmer
- Various types of attachments
- Nitroderm
- Taping

- Crutch (Except 100% Wooden made)
- Cane

- Weights for strength training, etc. (Sandbags), (Power Ankle)
- Fitness vest

- Cellular phone
- Smartphone
- Tablet

- Mask (containing metal)

- Magnetic card (ID cards, bank cards, credit cards, etc.)

- Pocket knife

- Watch
- Metal accessory
- Lighter

- Wallet and bill clip
- Coins and medals

- Safety pin
- Zener clip

- Pen
- Pencil

- Key

- Other materials unknown
